

Ritz Exterior Design

A focus on the finer details means that landscapes designed and constructed by Ritz Exterior Design are nothing short of stunning.

THE POOL AND WATER FEATURE
stepping-stones are clad in travertine tiles, creating a resort-style ambience.

RED WORKED WITH Lump Sculpture Studio to create these striking feature lighting panels.

THE TIMBER ARBOUR was custom-made from recycled jarrah railway sleepers and RED rusted feature panels.

Luxury outdoor living spaces that complement beautiful homes are Guy Mouritz's passion and led him to establish Ritz Exterior Design (RED) in 2000.

The business consists of a small team who work on a limited number of projects each year. This allows them to spend more time on detail and ensure that each project runs smoothly.

RED manages the entire process, from initial 3D concepts, design specifications and engineering, to local council approvals and construction.

Green practices feature heavily in all of RED's designs, from rainwater harvesting systems and waterwise irrigation, to sustainable materials.

During construction, Guy works on site to ensure procedures are carried out correctly; after all, a project is not just a job, it's a client's home.

This thorough, personalised service has earned Ritz Exterior Design multiple accolades including gold awards of excellence at this year's Landscape Industry Association Awards.

APPLECROSS LANDSCAPE

Before building began on this 1075sqm corner block in Applecross, the owners contracted RED to design and project manage the entire exterior of the home, from the lighting, decking, artificial turf and planting, to the reticulation, brick walls, water

features, pool and spa.

The existing pool shell had been installed too high so RED incorporated it into the design by creating a spillway into the water feature, which wraps around the lounge room.

RED also created distinct styles for the property's two entry points - the front entrance is enhanced by stepping-stone timber decking, curved lawn edging and sunken garden beds of Magnolia Exmouth; while the alternative entrance features a recycled timber arbour with rusted steel feature panels, suspended above, to create a shadow effect with the movement of the sun. At night, powerful LED up-lights illuminate the arbour for a dramatic effect.
